SUBJECT INDEX

Adverse pressure gradient 129
Aenigmatite 286
Alkali titanates, crystal growth 408
Aluminosilicate, sodium 367
Ambipolar diffusion coefficient 97
Amorphization 54
Anatase 365
Andalusite 273
Anemometry, Doppler 178
Anisotropic quasiplastic dilations 21
Anisotropy, elastic 20
Annealing
  radiation 94
  ruby laser 94
Antygotite 292
Apatite 299, 303
Ardennite 306
Argon 57
Arrhenius plots 44
Arsenolite 370
Artinite 282
Asbolane structure 367
Ashcroftine 282
Astrakhanite 283
Astrophyllite 286
Auger recombination 98
Axial stresses 88
Axial velocity profiles 151
Axisymmetric fluid flow 168

Barrel reactors 149
Batlsite 290
Belov's concept 281
Bementite 291
Bernessite structure 367
Binary phase diagram 233
Blast furnace slags 301
Bohemite 364
Boltzmann constant 6, 198
Bond breaking 94
Borates 224
  structural units 326
Boundary layer models 125
Boundary layer theory 123
Brianite 301
Bronzes, tetragonal 372
Brookite 365
Brucite 364
Bunsenite 363
Buoyancy forces 163
Buserite 367

Canaphite 275, 282
Canasite 289
Carnegieite 317, 367
Carrier gases 114
  physical properties 198
Caysichite 289
Centre line velocity 164
Chalcogenide thin films 102
Clalconatronite 282
Chebyashev parameters 88
Chemical vapour deposition (CVD) 113
  reactors 111
Chervetite 276
Chimney reactor 162
Coesite 273, 311
Cold-wall channel reactor 162
Columbite 365
Composition and doping 187
Compressive stress 89
Copolymerization 301
Corundum 365
Couette flow 158
Creeping of fluxed melt 223
Crucible composition 223
Crucible corrosion 223
Crystal growth 213
  alkali titanates 408
  arsenates 342
  crystallization temperature 243
  octahedrally coordinated compounds 399
  phosphates 336
  rare earth molybdates 411
  rare earth tantalates 404
  vanadates 342
Crystal growth fluxes 225
Crystal growth processes, classification 329
Crystalline amorphous transformation 89
Crystallite nucleation 54
Crystallization and dissolution 243
Crystallization, photostimulation 94
Crystals
  decomposition temperature 227
  dopant content 258
  electrolysis 10
  incongruent melting 217
  physicochemical analysis 218
  synthetic 270
Cyclophosphates 279

Dangling bonds 90
Decomposition temperature 227
Deformation fields 22
Deformation, shear and thermoelastic 87
Deposition, laser induced 101
Deposition reactors, chemical vapour 111
Diamond 270
Diaspore 364
Differential thermal analysis 220
Diffusional mixing 127
Diffusion modelling 101

Dimensionless numbers 118
Dislocation, edge and screw 90
Dislocation free layers 95
Dislocation free regions 90
Dislocation loops 91
Disordered lattice 94
Distribution coefficient 188
Dizanalite 392
Dopant content of crystals 258
Dopant distribution profiles 100
Doppler anemometry 178
Double crystal resolving power 32
Dugamello–Neumann relationship 88
Dundesite 282

Eakerite 288
Edge dislocation 90
Elastic anisotropy 20
Elastic medium, isotropic 87
Elastic strain fields 12
Elasticity limit 87
Electron hole pairs 94
Electron hole plasma 61
Elongation, shear 87
Enstatite 375
Enthalpy of motion 101
Epididymite 289
Epistolite 391
Epitaxial growth, lateral 81
Etching, hydrothermal 10

Feed gas density changes 185
Feed gas reactor, chamber interface 126
Fenaksite 289, 290
Ferrite, calcium 367
Ferroelectrics 327
Fields, deformation 22
Finite difference model 125
Flow
  axisymmetric 168
  dispersion 192, 194
  diverging channels 180
  drag 179
  gravity 179
  heterojunctions 196
  numerical model 172
  roll waves 181
  rotational effects 169
  separation 164
  thermal convection 184
  turbulence 172
  visualization 178
Fluid flow 114
Flux for crystal growth 225
Forsterite 300
Fourier transform 19

Ganophyllite 291
Garnet 270
Gas flow
  affecting forces 119
  Couette 121
Gas switching 192
Gas velocity vector 117
Germanates 333
Germanium 56
Gibbsite 364
Glaserite 320
Glaucochroite 301
Goethite 364
Granite 302
Grashof number 118
Gravitational acceleration vector 117
Growth acceleration 3
Growth striation generation 4
Growth striation, induced 1
Grumantite 293

Halite 363
Halogenides 364
HEMT semiconductor 67
Heptatantalates, rare earths 382
Heterojunctions 196
High electron mobility transistors 113
High pressure growth 2
High temperature growth 2
Hollandite 366
Hooke's Law 20
Horizontal reactors 135
Hydrothermal etching 10
Hydrothermal growth 2
Hydrothermal synthesis parameters 5

Ilmenite 365
Ilmenorutile 392
Induced growth striations 1
Inessite 290
Interfaces, displacement velocity 3
Inverted vertical reactor 167
Ion exchangers 314
Ion-implanted layers 90
Ion implantation 57
Ionic conductors 315
Iron/manganese nodules 366
Irradiation, ultraviolet laser 102
Isomorphism
  silicon and arsenic 306
  silicon and phosphorus 299
Isotopic elastic medium 87

Kinematic viscosity 122
Kolmogorov probability model 85

Laminar mixing 127
Lang topography 23
Laser
  multiple quantum well 113
  ruby 65, 93
  XeCl eximer 101
Laser induced deposition 101
Lateral epitaxial growth 81

Lattice
  atomic disturbance 10
  disordered 94
  kinetic control 189
  thermodynamic control 189
Lattice heat 97
Lattice matching 187
Lattice parameters, Bond method 35
Layer amorphization 54
Le Bas volume 198
Lennard–Jones parameters 198
Lepidocrocite 364
Lewis number 120
Liquid phase epitaxy (LPE) 69, 93
Liquidus and solubility 250
Lithophillite 300
Loparite 392
Luminophors 324

Manganosite 363
Martensitic crystal transformations 95
Mass transfer control 187
Mass transport 118
Mause's salts 283
Mechanical stress energy 59
Mechanical stresses 88
Medaite 306
Melt crystallization rate 81
Melt front 71
Merwinite 301
Metal organic vapour phase epitaxy (MOVPE) also (MOCVD) 113, 197
Micas 270
Molecular beam epitaxy 67, 102
Molecular sieves 314
Molybdenum bronzes 397
Multiple plase crystals 216
Multiple quantum well laser 113
Myserite 290

Narsarsukite 289
NASICON 318
Natrophilite 301
Neodymium heptatantalate 406
Nesquehonite 282
Nezoite 325
Nioboloparite 392
Non-uniform space network 83
Nucleation control 219
Numerical modelling 123

Octahedrally coordinated compounds 361
  crystal growth 399
Optical density distribution 29
Optoelectronic materials 324
Orthophosphates 279
Oxide fluxes 235
Oxide superconducting materials 213
Oxide superconductor decomposition 224
Oxide systems 230
Oxymolybdates 413

Parabolic velocity distributions 127
Pauling's V rule 278
Peclet number 119
Pentagonite 292
Periclase 363
Perovskite 371
Phosphate analogues 269
Phosphates 274
  chemical classification 279
  crystal growth 337
  rare earth 337
  superionic 318
Phosphides 274
Photometric curve 34
Photostimulation 94
Phyllophosphates 280
Piezo-ferroelectric properties 361
Pile-ups 92
Plane wave topography 12, 18
Plasma, electron hole 61
Poisson's ratio 87
Polycentric growth 69
Polycondensation 275
Polygorskite 292
Polyphosphates 279
Porous glass frit 132
Prandtl number 120
Protoenstatite 300
Pulse annealing, thermoelastic stresses 87
Pulse heating 53
Pyromorphite 299
Pyrophosphates 279
Pyroxene 290

Quartz 2, 270, 310
Quartz crystals, coloration 10
Quasiplastic deformation 21

Radiation annealing 94
Radiation, CuK and MoK 12
Radiation damage effects 87
Radio frequency heating 197
Rare earth heptatantalates 382
Rare earth molybdates, crystal growth 411
Rare earth phosphates 337
Rare earth tantalates, crystal growth 404
Rayleigh–Benard problem 141
Rayleigh number 120
Reactor design 116
Reactor entrance geometry 175
Reactors
  calculation symbols 203
  chemical vapour deposition 115
  chimney 162
  cold-wall channel 162
  inverted vertical 167
  pancake 175
  vertical 167
  water cooled 171
Recirculating flow 127
Recrystallization, zone melting 87
Redox process, X-ray induced 41

Reflection coefficient 93
Resolving power of double crystals 32
Reynolds number 119
Rhodonite 290
Ribbon phosphates 280
Roll waves 139
Ruby laser 65, 93
Ruby laser annealing 94
Rutile 365

Sahamalite 282
Saneroite 286
Schmidt number 120
Screw dislocation 90
Segregation coefficient 100
Self-sustained crystallization 55
Senarmonite 371
Sepyolite 292
Shear deformation 87
Shear elongation 87
Shift modulus 87
Silicate analogues 269
Silicates
  anionic chains 287
  anionic rings 284
  bichromate-like 277
  branched ring 288
  chemical classification 277
  comparative chemistry 308
  configuration 272
  framework 293, 314
  high pressure transformation 310
  layered 293
  rare earth 332
  sodium zirconium 330
  structural analogue diversity 271, 273
  superionic 314
  tetrahedral bands 289
  tetrahedral chains 285
  tortveitite-like 277
Sillimanite 289
Smokey quartz centre 8
Sodium zirconium silicates 330
Solid phase epitaxy (SPE) 53, 56, 69, 94, 102
Solvent evaporation 240
Soret diffusion 200
Sorophosphates 279
Space network, non-uniform 83
Starkeyite 283
Static mixers 127
Stephan problem 69
Stibiotantalite 396, 400
Stilbiotantalate 361
Stilvellite 290
Stress
  axial 88
  compressive 89
  mechanical 88
  tangent 88
  tensile 89
Striation formation 2
  structural transformation, pulse heating 53
Struvenite 392
Superconductor oxidation and reduction 257
Superionic phosphate growth 340
Surinamite 286
Susceptor
  rotation 157
  spinning 167
  stationary 167
  temperature control 190
  tilt and rotation 139
Synthetic crystals 270

Tangent stresses 87
Tantalite 365
Taylor number 121
Taylor vortices 159
Temperature modulation, periodical 3
Tenorite 363
Tensile stress 89
Tephroite 300
Tetrahedral complex condensation 275
Tetrahedrally coordinated anionic group compounds 270
Thermal convection 184
Thermal diffusion 117, 136
Thermal expansion coefficient 35, 87
Thermal transition length 137
Thermalization 61
Thermoelastic deformation 87
Thermoelastic pulse annealing 87
Thermogravimetric analysis 219
Thermophoresis 125, 178
Tienshanite 288
Tiragalloite 306
Titanates 365
Titanium minerals 393
Titanium/zirconium isomorphism 392
Titanoniobates 408
Titanosilicates 385
Todorokite 367
Topography, Lang 23
Transformation
  crystalline amorphous 89
  martensitic 95
Transistors, high electron mobility 113
Trigonal distortion 365
Tuhualite 289
Turbulent jets 127

Ultraviolet laser irradiation 102
Uralborite 288

Velocity, centre line 164
Volocity profiles 130
Vertical reactor 167
Vinogradovite 289
Viscous forces 114
Viscous stress tensor 117
VLSI technology 67
Vortex, Taylor 159
Vuonnemite 391
Vustite 363

Wolframite 366
Wollastonite 290

XeCl eximer laser 101
X-ray induced redox process 41
X-ray topography 1, 22
X-ray Weissenberg photography 261

Yttrium iron garnet 399

Zeldovich kinetic factor 85
Zeolites 270, 314
Zimbabvite 373
Zircon 299
Zirconolite 392
Zirconium germanates 334
Zone melting recrystallization 86

COMPOUND INDEX

$AlGaAs$ 113
Al_2O_3 365
$Al(OH)_3$ 364
$AlO(OH)$ 364
Al_2SiO_5 273
As_2O_3 371

$(BaPb)(TiSn)O_3$ 391
$(BaSr)TiO_3$ 391
$Ba_6Ti_2Nb_8O_{30}$ 391
$BaTiO_3$ 362, 410
$BaZrO_3$ 410
$BiNbO_4$ 404
$Bi_2Sr_2CaCu_2O$ 113

$(CH_3)_3Al$ 198
$(CH_3)_3Ga$ 113, 198
$(CH_3)_3In$ 113, 122, 136, 198
$(C_2H_5)_3Al$ 198
$(C_2H_5)_3Ga$ 198
$(C_2H_5)_3In$ 122, 198
$CaFe_2O_4$ 367
$(CaNaCe)(TiNbFe)O_3$ 392
$CaTiO_3$ 371
$CaZr(TiNbFe)_2O_7$ 392
$CdMoO_4$ 411
CuO 363

$(FeMn)(NbTa)_2O_6$ 365
$(FeMn)WO_4$ 366
FeO 363
$FeO(OH)$ 364
$FeTiO_3$ 365

$GaAs$ 113
$GaAsP$ 113

$HgCdTe$ 113

$InGaAsP$ 113
InP 113, 136

$KEu(MoO_4)_2$ 412
$K(NbTi)O_5$ 387

LiB_3O_5 327
$Li_5Cd_6(MoO_4)_6(OH)_5$ 411
$LiFeO_2$ 364
$LiMnPO_4$ 300
$LiNbO_3$ 327
$Li_2Zn_3(MoO_4)_4$ 411

$MgGeO_3$ 365
Mg_6MnO_8 363
$Mg(OH)_2$ 364
$MgSiO_3$ 300, 375
Mg_2SiO_4 300
MnO 363
$MnSiO_4$ 300
MoO_3 413

$NaAlSiO_4$ 317, 367
$(NaCeCa)(TiNb)O_3$ 392
$(NaCeCa)TiO_3$ 392
$NaDyO_2$ 364
$NaFeO_2$ 364
$Na_2(NbTi)_2Si_2O_9$ 391
$Na_4TiNb_2Si_4O_{17}.2Na_3PO_4$ 391
$Na_2Ti_3O_7$ 387
NbN 113
$NdTa_7O_{19}$ 497
$(NH_4)_2Ce(PO_3)_5$ 279
NiO 363

$PbNb_9O_{25}$ 374
$Pb_2V_2O_7$ 276

$RbTiNbO_3$ 395

Sb_2O_3 371
Si 53
SiC 113
$SiCl_4$ 113
SiH_4 113, 122
Si_3N_4 113
SiO_2 5

Ta_2O_5 380
$TiCl_4$ 179
$(TiNbFe)O_2$ 392
$TiNbO_7$ 391
TiO_2 179, 365
$(TiTaFe)O_2$ 392

$YBa_2Cu_3O_7$ 113
$YNbTiO_6$ 391

$ZnGeO_3$ 365
$ZnMoO_4$ 411
